

# A-Z Kali Linux Commands PDF

## Kali Linux commands

## Function

### A

|          |                                                     |
|----------|-----------------------------------------------------|
| apropos  | Search Help manual pages (man -k)                   |
| apt-get  | Search for and install software packages (Debian)   |
| aptitude | Search for and install software packages (Debian)   |
| aspell   | Spell Checker                                       |
| awk      | Find and Replace text, database sort/validate/index |

### B

|          |                                           |
|----------|-------------------------------------------|
| basename | Strip directory and suffix from filenames |
| bash     | GNU Bourne-Again Shell                    |
| bc       | Arbitrary precision calculator language   |
| bg       | Send to background                        |
| break    | Exit from a loop                          |
| builtin  | Run a shell builtin                       |
| bzip2    | Compress or decompress named files        |

### C

|           |                                                      |
|-----------|------------------------------------------------------|
| cal       | Display a calendar                                   |
| case      | Conditionally perform a command                      |
| cat       | Concatenate and print (display) the content of files |
| cd        | Change Directory                                     |
| cfdisk    | Partition table manipulator for Linux                |
| chgrp     | Change group ownership                               |
| chmod     | Change access permissions                            |
| chown     | Change file owner and group                          |
| chroot    | Run a command with a different root directory        |
| chkconfig | System services (runlevel)                           |
| cksum     | Print CRC checksum and byte counts                   |
| clear     | Clear terminal screen                                |
| cmp       | Compare two files                                    |
| comm      | Compare two sorted files line by line                |
| command   | Run a command – ignoring shell functions             |
| continue  | Resume the next iteration of a loop                  |
| cp        | Copy one or more files to another location           |
| cron      | Daemon to execute scheduled commands                 |
| crontab   | Schedule a command to run at a later time            |
| csplit    | Split a file into context-determined pieces          |
| cut       | Divide a file into several parts                     |

### D

|          |                                                           |
|----------|-----------------------------------------------------------|
| date     | Display or change the date and time                       |
| dc       | Desk Calculator                                           |
| dd       | Convert and copy a file, write disk headers, boot records |
| ddrescue | Data recovery tool                                        |
| declare  | Declare variables and give them attributes                |
| df       | Display free disk space                                   |

|           |                                                          |
|-----------|----------------------------------------------------------|
| diff      | Display the differences between two files                |
| diff3     | Show differences among three files                       |
| dig       | DNS lookup                                               |
| dir       | Briefly list directory contents                          |
| dircolors | Colour setup for `ls`                                    |
| dirname   | Convert a full pathname to just a path                   |
| dirs      | Display list of remembered directories                   |
| dmesg     | Print kernel & driver messages                           |
| du        | Estimate file space usage                                |
| <b>E</b>  |                                                          |
| echo      | Display message on screen                                |
| egrep     | Search files for lines that match an extended expression |
| eject     | Eject removable media                                    |
| enable    | Enable and disable builtin shell commands                |
| env       | Environment variables                                    |
| ethtool   | Ethernet card settings                                   |
| eval      | Evaluate several commands/arguments                      |
| exec      | Execute a command                                        |
| exit      | Exit the shell                                           |
| expect    | Automate arbitrary applications accessed over a terminal |
| expand    | Convert tabs to spaces                                   |
| export    | Set an environment variable                              |
| expr      | Evaluate expressions                                     |
| <b>F</b>  |                                                          |
| false     | Do nothing, unsuccessfully                               |
| fdformat  | Low-level format a floppy disk                           |
| fdisk     | Partition table manipulator for Linux                    |
| fg        | Send job to foreground                                   |
| fgrep     | Search files for lines that match a fixed string         |
| file      | Determine file type                                      |
| find      | Search for files that meet a desired criteria            |
| fmt       | Reformat paragraph text                                  |
| fold      | Wrap text to fit a specified width                       |
| for       | Expand words, and execute commands                       |
| format    | Format disks or tapes                                    |
| free      | Display memory usage                                     |
| fsck      | File system consistency check and repair                 |
| ftp       | File Transfer Protocol                                   |
| function  | Define Function Macros                                   |
| fuser     | Identify/kill the process that is accessing a file       |
| <b>G</b>  |                                                          |
| gawk      | Find and Replace text within files                       |
| getopts   | Parse positional parameters                              |
| grep      | Search files for lines that match a given pattern        |
| groupadd  | Add a user security group                                |
| groupdel  | Delete a group                                           |
| groupmod  | Modify a group                                           |
| groups    | Print group names a user is in                           |

|          |                                                       |
|----------|-------------------------------------------------------|
| gzip     | Compress or decompress named files                    |
| <b>H</b> |                                                       |
| hash     | Remember the full pathname of a name argument         |
| head     | Output the first part of files                        |
| help     | Display help for a built-in command                   |
| history  | Command History                                       |
| hostname | Print or set system name                              |
| <b>I</b> |                                                       |
| iconv    | Convert the character set of a file                   |
| id       | Print user and group id's                             |
| if       | Conditionally perform a command                       |
| ifconfig | Configure a network interface                         |
| ifdown   | Stop a network interface                              |
| ifup     | Start a network interface up                          |
| import   | Capture an X server screen and save the image to file |
| install  | Copy files and set attributes                         |
| <b>J</b> |                                                       |
| jobs     | List active jobs                                      |
| join     | Join lines on a common field                          |
| <b>K</b> |                                                       |
| kill     | Stop a process from running                           |
| killall  | Kill processes by name                                |
| <b>L</b> |                                                       |
| less     | Display output one screen at a time                   |
| let      | Perform arithmetic on shell variables                 |
| ln       | Create a symbolic link to a file                      |
| local    | Create variables                                      |
| locate   | Find files                                            |
| logname  | Print current login name                              |
| logout   | Exit a login shell                                    |
| look     | Display lines beginning with a given string           |
| lpc      | Line printer control program                          |
| lpr      | Off line print                                        |
| lprint   | Print a file                                          |
| lprintd  | Abort a print job                                     |
| lprintq  | List the print queue                                  |
| lprm     | Remove jobs from the print queue                      |
| ls       | List information about files                          |
| lsuf     | List open files                                       |
| <b>M</b> |                                                       |
| make     | Recompile a group of programs                         |
| man      | Help manual                                           |
| mkdir    | Create new folders                                    |
| mkfifo   | Make FIFOs (named pipes)                              |
| mkisofs  | Create an hybrid ISO9660/JOLIET/HFS filesystem        |
| mknod    | Make block or character special files                 |
| more     | Display output one screen at a time                   |
| mount    | Mount a file system                                   |

|             |                                           |
|-------------|-------------------------------------------|
| mtools      | Manipulate MS-DOS files                   |
| mtr         | Network diagnostics (traceroute/ping)     |
| mv          | Move or rename files or directories       |
| mmv         | Mass Move and rename files                |
| <b>N</b>    |                                           |
| netstat     | Networking information                    |
| nice        | Set the priority of a command or job      |
| nl          | Number lines and write files              |
| nohup       | Run a command immune to hangups           |
| notify-send | Send desktop notifications                |
| nslookup    | Query Internet name servers interactively |

## **O**

|      |                                        |
|------|----------------------------------------|
| open | Open a file in its default application |
| op   | Operator access                        |

## **P**

|          |                                                     |
|----------|-----------------------------------------------------|
| passwd   | Modify a user password                              |
| paste    | Merge lines of files                                |
| pathchk  | Check file name portability                         |
| ping     | Test a network connection                           |
| pkill    | Stop processes from running                         |
| popd     | Restore the previous value of the current directory |
| pr       | Prepare files for printing                          |
| printcap | Printer capability database                         |
| printenv | Print environment variables                         |
| printf   | Format and print data                               |
| ps       | Process status                                      |
| pushd    | Save and then change the current directory          |
| pwd      | Print Working Directory                             |

## **Q**

|            |                                   |
|------------|-----------------------------------|
| quota      | Display disk usage and limits     |
| quotacheck | Scan a file system for disk usage |
| quotactl   | Set disk quotas                   |

## **R**

|           |                                           |
|-----------|-------------------------------------------|
| ram       | ram disk device                           |
| rcp       | Copy files between two machines           |
| read      | Read a line from standard input           |
| readarray | Read from stdin into an array variable    |
| readonly  | Mark variables/functions as readonly      |
| reboot    | Reboot the system                         |
| rename    | Rename files                              |
| renice    | Alter priority of running processes       |
| remsync   | Synchronize remote files via email        |
| return    | Exit a shell function                     |
| rev       | Reverse lines of a file                   |
| rm        | Remove files                              |
| rmdir     | Remove folders                            |
| rsync     | Remote file copy (Synchronize file trees) |

## S

|          |                                               |
|----------|-----------------------------------------------|
| screen   | Multiplex terminal, run remote shells via ssh |
| scp      | Secure copy (remote file copy)                |
| sdiff    | Merge two files interactively                 |
| sed      | Stream Editor                                 |
| select   | Accept keyboard input                         |
| seq      | Print numeric sequences                       |
| set      | Manipulate shell variables and functions      |
| sftp     | Secure File Transfer Program                  |
| shift    | Shift positional parameters                   |
| shopt    | Shell Options                                 |
| shutdown | Shutdown or restart linux                     |
| sleep    | Delay for a specified time                    |
| slocate  | Find files                                    |
| sort     | Sort text files                               |
| source   | Run commands from a file                      |
| split    | Split a file into fixed-size pieces           |
| ssh      | Secure Shell client (remote login program)    |
| strace   | Trace system calls and signals                |
| su       | Substitute user identity                      |
| sudo     | Execute a command as another user             |
| sum      | Print a checksum for a file                   |
| suspend  | Suspend execution of this shell               |
| symlink  | Make a new name for a file                    |
| sync     | Synchronize data on disk with memory          |

## T

|            |                                              |
|------------|----------------------------------------------|
| tail       | Output the last part of file                 |
| tar        | Tape Archiver                                |
| tee        | Redirect output to multiple files            |
| test       | Evaluate a conditional expression            |
| time       | Measure Program running time                 |
| times      | User and system times                        |
| touch      | Change file timestamps                       |
| top        | List processes running on the system         |
| traceroute | Trace Route to Host                          |
| trap       | Run a command when a signal is set(bourne)   |
| tr         | Translate, squeeze, and/or delete characters |
| true       | Do nothing, successfully                     |
| tsort      | Topological sort                             |
| tty        | Print filename of terminal on stdin          |
| type       | Describe a command                           |

## U

|          |                          |
|----------|--------------------------|
| ulimit   | Limit user resources     |
| umask    | Users file creation mask |
| umount   | Unmount a device         |
| unalias  | Remove an alias          |
| uname    | Print system information |
| unexpand | Convert spaces to tabs   |
| uniq     | Uniquify files           |

|          |                                                                    |
|----------|--------------------------------------------------------------------|
| units    | Convert units from one scale to another                            |
| unset    | Remove variable or function names                                  |
| unshar   | Unpack shell archive scripts                                       |
| until    | Execute commands (until error)                                     |
| uptime   | Show uptime                                                        |
| useradd  | Create new user account                                            |
| usermod  | Modify user account                                                |
| users    | List users currently logged in                                     |
| uuencode | Encode a binary file                                               |
| uudecode | Decode a file created by uuencode                                  |
| <b>V</b> |                                                                    |
| v        | Verbosely list directory contents ( <code>`ls -l -b`</code> )      |
| vdir     | Verbosely list directory contents ( <code>`ls -l -b`</code> )      |
| vi       | Text Editor                                                        |
| vmstat   | Report virtual memory statistics                                   |
| <b>W</b> |                                                                    |
| wait     | Wait for a process to complete                                     |
| watch    | Execute/display a program periodically                             |
| wc       | Print byte, word, and line counts                                  |
| whereis  | Search the user's \$path, man pages and source files for a program |
| which    | Search the user's \$path for a program file                        |
| while    | Execute commands                                                   |
| who      | Print all usernames currently logged in                            |
| whoami   | Print the current user id and name ( <code>`id -un`</code> )       |
| wget     | Retrieve web pages or files via HTTP, HTTPS or FTP                 |
| write    | Send a message to another user                                     |
| <b>X</b> |                                                                    |
| xargs    | Execute utility, passing constructed argument lists                |
| xdg-open | Open a file or URL in the user's preferred application             |
| <b>Y</b> |                                                                    |
| yes      | Print a string until interrupted                                   |
